Description :

Prsentation de l'diteurThe e-book presents a brief history of renewable energy work carried out since 1981 at rural NGO called Nimbkar Agricultural Research Institute situated in Phaltan, Maharashtra State, India. The aim of the book is to inspire youngsters to enter the field of rural innovation and to provide challenging ideas for research and development to those who already are converts, said Dr. Rajvanshi the author of the book.

Too often the record of research and development (RD) is written up as articles in journals and books. The human interest story of the way the research was done, interactions with the stakeholders and the pushes and pulls in doing it are left out of the record, said Dr. Rajvanshi. This book is an attempt to record these details.

It also shows how RD can be done in a small rural institute and should provide inspiration to other NGOs

who want to do a similar type of work, said Dr. Rajvanshi. Dr. Rajvanshi has written in an engaging style about the romance of doing research in rural setting and has shown that with meager resources and few members of staff, very meaningful and satisfying work can be done. It is often said that good RD requires lot of equipment, money and manpower. Work on renewable energy at NARI has shown that it is possible to do good work in little money and resources, said Dr. Rajvanshi. There are six chapters in the book, out of which four describe the hardware development work carried out in household energy (cooking and lighting); gasification; electric cycle rickshaws and water-related problems. Two chapters deal with philosophical issues and out of them the last one gives a roadmap for the future development of rural India. The book is a very interesting read as it emphasizes the human interest aspect of problem solving for rural India. The future research areas described at the end of each chapter will certainly be very useful for persons who are planning to develop a career in research and development for rural areas. The book is available free of cost and is also available on NARI website <http://www.nariphaltan.org/roi.pdf>. Dr. Rajvanshi explained that there is a need to inspire and get bright young engineers for rural RD and thus making the book available free may help in this effort.
